Re: Docket No. 05-196

To Whom It May Concern:

iCore Networks, Inc. has begun providing interconnected VoIP services and is in compliance with DA 05-196, a detailed explanation follows.

Notification and acknowledgement are covered in two documents, the original signed contract and an affirmative acknowledgement signed by the customer. 100% of customers have affirmatively acknowledged they understand the limitations of e911 services with our VoIP service.

All customers are required to provide accurate and verified location information prior to our initiation of service for the initial location the service is utilized. This information is loaded into a database provided by our service provider (Intrado). The location information may be updated by either calling our customer service department where the customer service agent will input the additional location information or the customer can input the information via our website where the location information is automatically uploaded into the location database for the current "Registered Location".

Customer Registered Locations information for all customers is made available through ALI Databases through a contracted provider (Intrado).

Warning stickers are provided to customers stating the limitations of VoIP E911 services that may be attached to the VoIP phone.

Jerry Cady
President, COO
